Professional Summary

Aspiring Data Scientist with 3.10 years of NLP experience. Skilled in Python, SQL, machine learning, data analysis. Strong expertise in NLP techniques, building rule-based NLP systems, improving model accuracy, and deploying solutions to production. Passionate about deriving insights from data, solving real-world problems, and building impactful, data-driven solutions.

Technical Skills

- **Programming:**
  Python, SQL, JavaScript, XML
- **Data Science:**
  Machine Learning, Natural Language Processing (NLP), Feature Engineering, Exploratory Data Analysis, Data Pre-processing, Data Visualization
- **NLP Techniques:**
  Tokenization, POS Tagging, Dependency Parsing, Named Entity Recognition (NER), Regular Expressions (Regex)
- **Python Libraries:**
  Pandas, NumPy, Matplotlib, Seaborn, Plotly, Scikit-Learn, SciPy, NLTK, Spacy, BeautifulSoup, Requests
- **Tools & Platforms:**
  Jupyter Notebook, VS Code, PyCharm, Git, Bitbucket, JIRA, Postman, Microsoft SQL Server, Microsoft Azure

Professional Experience

Associate Programmer

Integra Software Services Pvt. Ltd. Puducherry — Oct 2018 - Aug 2022

- Developed and deployed 100+ NLP rules for a digital writing assistant for authors, enhancing detection and correction of spelling, grammar, punctuation, and style issues using a NLP rule-based methodology.
- Applied natural language processing techniques using Python, XML, JavaScript and industry-standard NLP libraries.
- Delivered solutions to three different clients, adapting rule logic to custom NLP rules, writing styles, and product needs.
- Worked within an Agile framework to iteratively develop, unit test, and deploy NLP rules from research, development to production ensuring high-quality standards and minimal false positives/negatives.
- Wrote automation scripts for unit testing, improving test coverage and reducing manual QA by 40%.
- Contributed to improving rule accuracy and reducing false positives in production systems by 60%.
- Conducted on boarding and training sessions for new hires, mentoring them on rule-writing, testing procedures, and NLP fundamentals.

Education

B.Tech Computer Science & Engineering 8.36 CGPA 2018
Achariya College of Engineering Technology, Puducherry

Certifications

IBM Data Science Professional Certificate
IBM / Coursera - 12 Course series

- Generative AI: Elevate Your Data Science Career — In Progress
- Data Scientist Career Guide and Interview Preparation — March 2026
- Applied Data Science Capstone — January 2026
- Machine Learning with Python — October 2025
- Data Visualization with Python — May 2025
- Data Analysis with Python — March 2025
- Databases and SQL for Data Science with Python — November 2024
- Python Project for Data Science — July 2024
- Python for Data Science, AI & Development — July 2024
- Data Science Methodology — March 2024
- Tools for Data Science — February 2024
- What is Data Science? — December 2023

IBM Data Science Capstone Project

SpaceX Falcon 9 Landing Outcome Prediction Using Machine Learning for Cost Optimization.

- This project analyses SpaceX Falcon 9 launch data collected through the SpaceX REST API and web scraping.
- The data was cleaned and structured through data wrangling, followed by exploratory analysis using visualizations and SQL.
- Interactive visual analytics were developed using Folium and Plotly Dash to better understand launch patterns and outcomes.
- Multiple classification models — Logistic Regression, Support Vector Machines, Decision Tree, and K Nearest Neighbors — were built and optimized using Grid Search.
- The models were evaluated and compared to identify the best-performing algorithm for predicting Falcon 9 first-stage landing success.

Academic Project

Healthcare domain using Hadoop HDFS to efficiently handle patients and big data analytics using Apache Pig

- Storing and retrieving the dataset in Hadoop HDFS, displaying particular patient details using a unique key in a web page and analysing the dataset using Apache Pig.
